# WELCOME TO THE NEW GAMBLING AGE

Blockchain technology has been proving its effectiveness in various industries for several years, confirming that outdated systems can no longer operate without renovations.

And the gambling industry is one of the top directions, which is showing steady growth and requires special modernization. According to experts from Grandview Research, by 2027 the market will reach \$127.3 billion with an average annual growth rate of 11.5%.

*ONLINE GAMBLING MARKET (in US\$b)*

The BICAS platform is the first blockchain casino to change the rules of the outdated game. And it's precisely technological progress that is able to bring this global direction to a new level.

Building on this, the BICAS platform strives to meet the demands of the modern user by providing a completely new, transparent approach to gaming through the implementation of blockchain technology and its own play-to-earn BCS token.

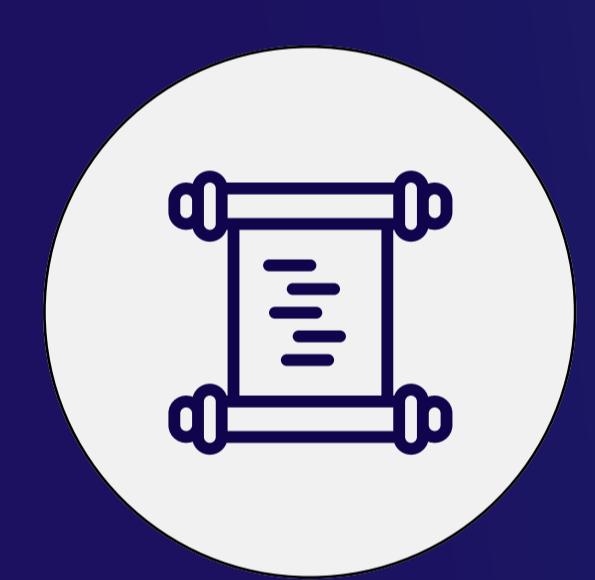

# BLOCKCHAIN IN GAMBLING

The fundamental benefit of blockchain is that all data is transparent. This is one of the factors that adds to user trust in the BICAS platform. In the gaming sector, blockchain is the major driver of transformation. All data recorded into the blockchain is permanent and cannot be edited or removed. As a consequence, BICAS platform users may be sure that all of their findings are accurate and that they are working in a secure atmosphere. All data on bets, platform income, and the number of participants is publicly available at the blockchain casino, ensuring complete transparency for players.

Regardless of how many years it has been in business, the gaming industry still confronts several issues in terms of openness among all parties involved:

players receive bonuses with wagers and get cashback only once a week or once a month

players can't check bets history and its fairness

affiliates who work closely with casinos to bring more players cannot be sure that they get fair revenue as they can't check all deposits made by players they brought

players can't rely on the platforms' honesty as casinos never share their revenues or the percentage of winnings in games

game providers should constantly check casinos' activities

Due to its decentralized and secure nature, blockchain can solve these problems.

BICAS is the world's first blockchain casino, allowing users to utilize cryptocurrencies as a payment option while also incorporating technology into numerous operations, including integrating its token into unique deals.

The best established technique to offer users with a fair gaming environment is through cryptography and decentralized technologies.

# BLOCKCHAIN IN GAMBLING

**Comparative characteristics of BICAS and standard gaming platforms in regards to transparency ensured by blockchain**

	STANDARD PLATFORMS	NAME
Fair results of bets	-	+
Instant cashback	-	+
Tokenized bonus program	-	+
Easy to use crypto tools	-	+

On the market, gambling platforms continue to follow the old rules, providing only games to their players while ignoring modern technologies that can greatly raise the degree of trust and scale the community.

## BLOCKCHAIN IN GAMBLING

BICAS'S single most essential business goal from the start was to become the first really and totally transparent gaming project. It was decided to bring in a third-party blockchain technology to avoid speculation and mistrust.

To make it happen, BICAS partnered with the MIXEDTECH blockchain platform, a ready-to-use solution that provides a set of tools for transparency that can be readily integrated into any online service.

### | BICAS's blockchain solution from MIXEDTECH

First and foremost, MIXEDTECH set up a proxy called the Truesign module. Technically, it's a very simple yet secure way to see everything that happens within BICAS without having any access to the data. Everything that happens in games is visible to Truesign, which can save it and publish it to the blockchain network (deposits, bet amount, bet result, bonuses, cashback, etc.). This manner, you may monitor the platform's current earnings or check the daily/weekly/monthly/yearly figures.

The Truesign module is designed to handle up to 99.99 percent of operator and game provider requests. The successful processing rate has already surpassed 95%, and the MIXEDTECH team is working hard to strengthen integrations so that this percentage can be even higher.

The entire goal of the Truesign module is to be able to observe and follow every occurrence at BICAS without having any technical ability to edit, delete, or add any data. As a blockchain-based gaming platform, it makes data transparent and unbiased, which is the whole objective of BICAS.

## USER INTERACTION WITH BCS

On the fastest-growing Ethereum blockchain, BICAS has created its own cryptocurrency, the BCS token, which was issued by MIXEDTECH. BCS is an ERC20 token, which means it may be used to create project tokenomics and be listed on cryptocurrency exchanges.

BICAS customers desire an immersive gaming experience as well as the ability to play games in a transparent setting where everyone can be confident in their outcomes.

Furthermore, a new way for BCS owners to participate with the site is emerging: play-to-earn. BICAS now rewards its users for being active in games and engaging in unique programs, when previously, all gamers spent their time on play-to-free platforms without obtaining any benefits for their efforts.

As a result, the BCS token is the primary asset that will be beneficial to all users throughout their BICAS experience.

## USER FLOW WITH BCS

## PLAY TO EARN PROGRAM

By just playing engaging games, any registered BICAS user can become the owner of the coin.

The platform offers a new and simple option to enter the crypto market by using the BCS earned as game reward.

At BICAS, you can play a variety of tokenized cashback games. Here are a few examples: Baccarat, Bingo, Black Jack, Casual Games, Instant Win Games, Keno, Live Baccarat, Live BlackJack, Live Dealer, Live Dice, Live Games, Live Lottery, Lottery, Poker, Scratch Cards, Sic Bo, Table Games, Video Bingo, Wheel of Fortune, Live Roulette, Video Poker, and a variety of other games are available.

### Best Performing Games with Play To Earn.

All of the programs on BICAS are linked together, allowing the user to reap even more benefits. In the Hold To Earn program, for example, the tokens earned in the Play To Earn program can be multiplied.

BICAS members receive their BCS tokenized reward instantaneously, whereas standard platforms pay cashbacks in players' currencies once a month or once a week. The following alternatives are available right now:

- transferring the received BCS to the balance;
- continue playing games;
- BCS should be removed from BICAS.
- To multiply the tokens obtained, place them on the holding.

## HOLD TO EARN PROGRAM

The Hold To Earn program is based on the best crypto traditions and encourages users to increase the quantity of BCS they own. Staking is a process in the crypto business that involves freezing a particular amount of tokens for a set period of time in order to gain incentives.

The BICAS platform is the world's first casino that not only runs on blockchain but also enables users earn even more cryptocurrency incentives.

The amount of the award is determined by numerous factors:

- the chosen holding duration;
- the number of participants in the holding;
- the quantity of tokens placed on the holding (the pool share is determined by this);
- income from BICAS at the time of holding.

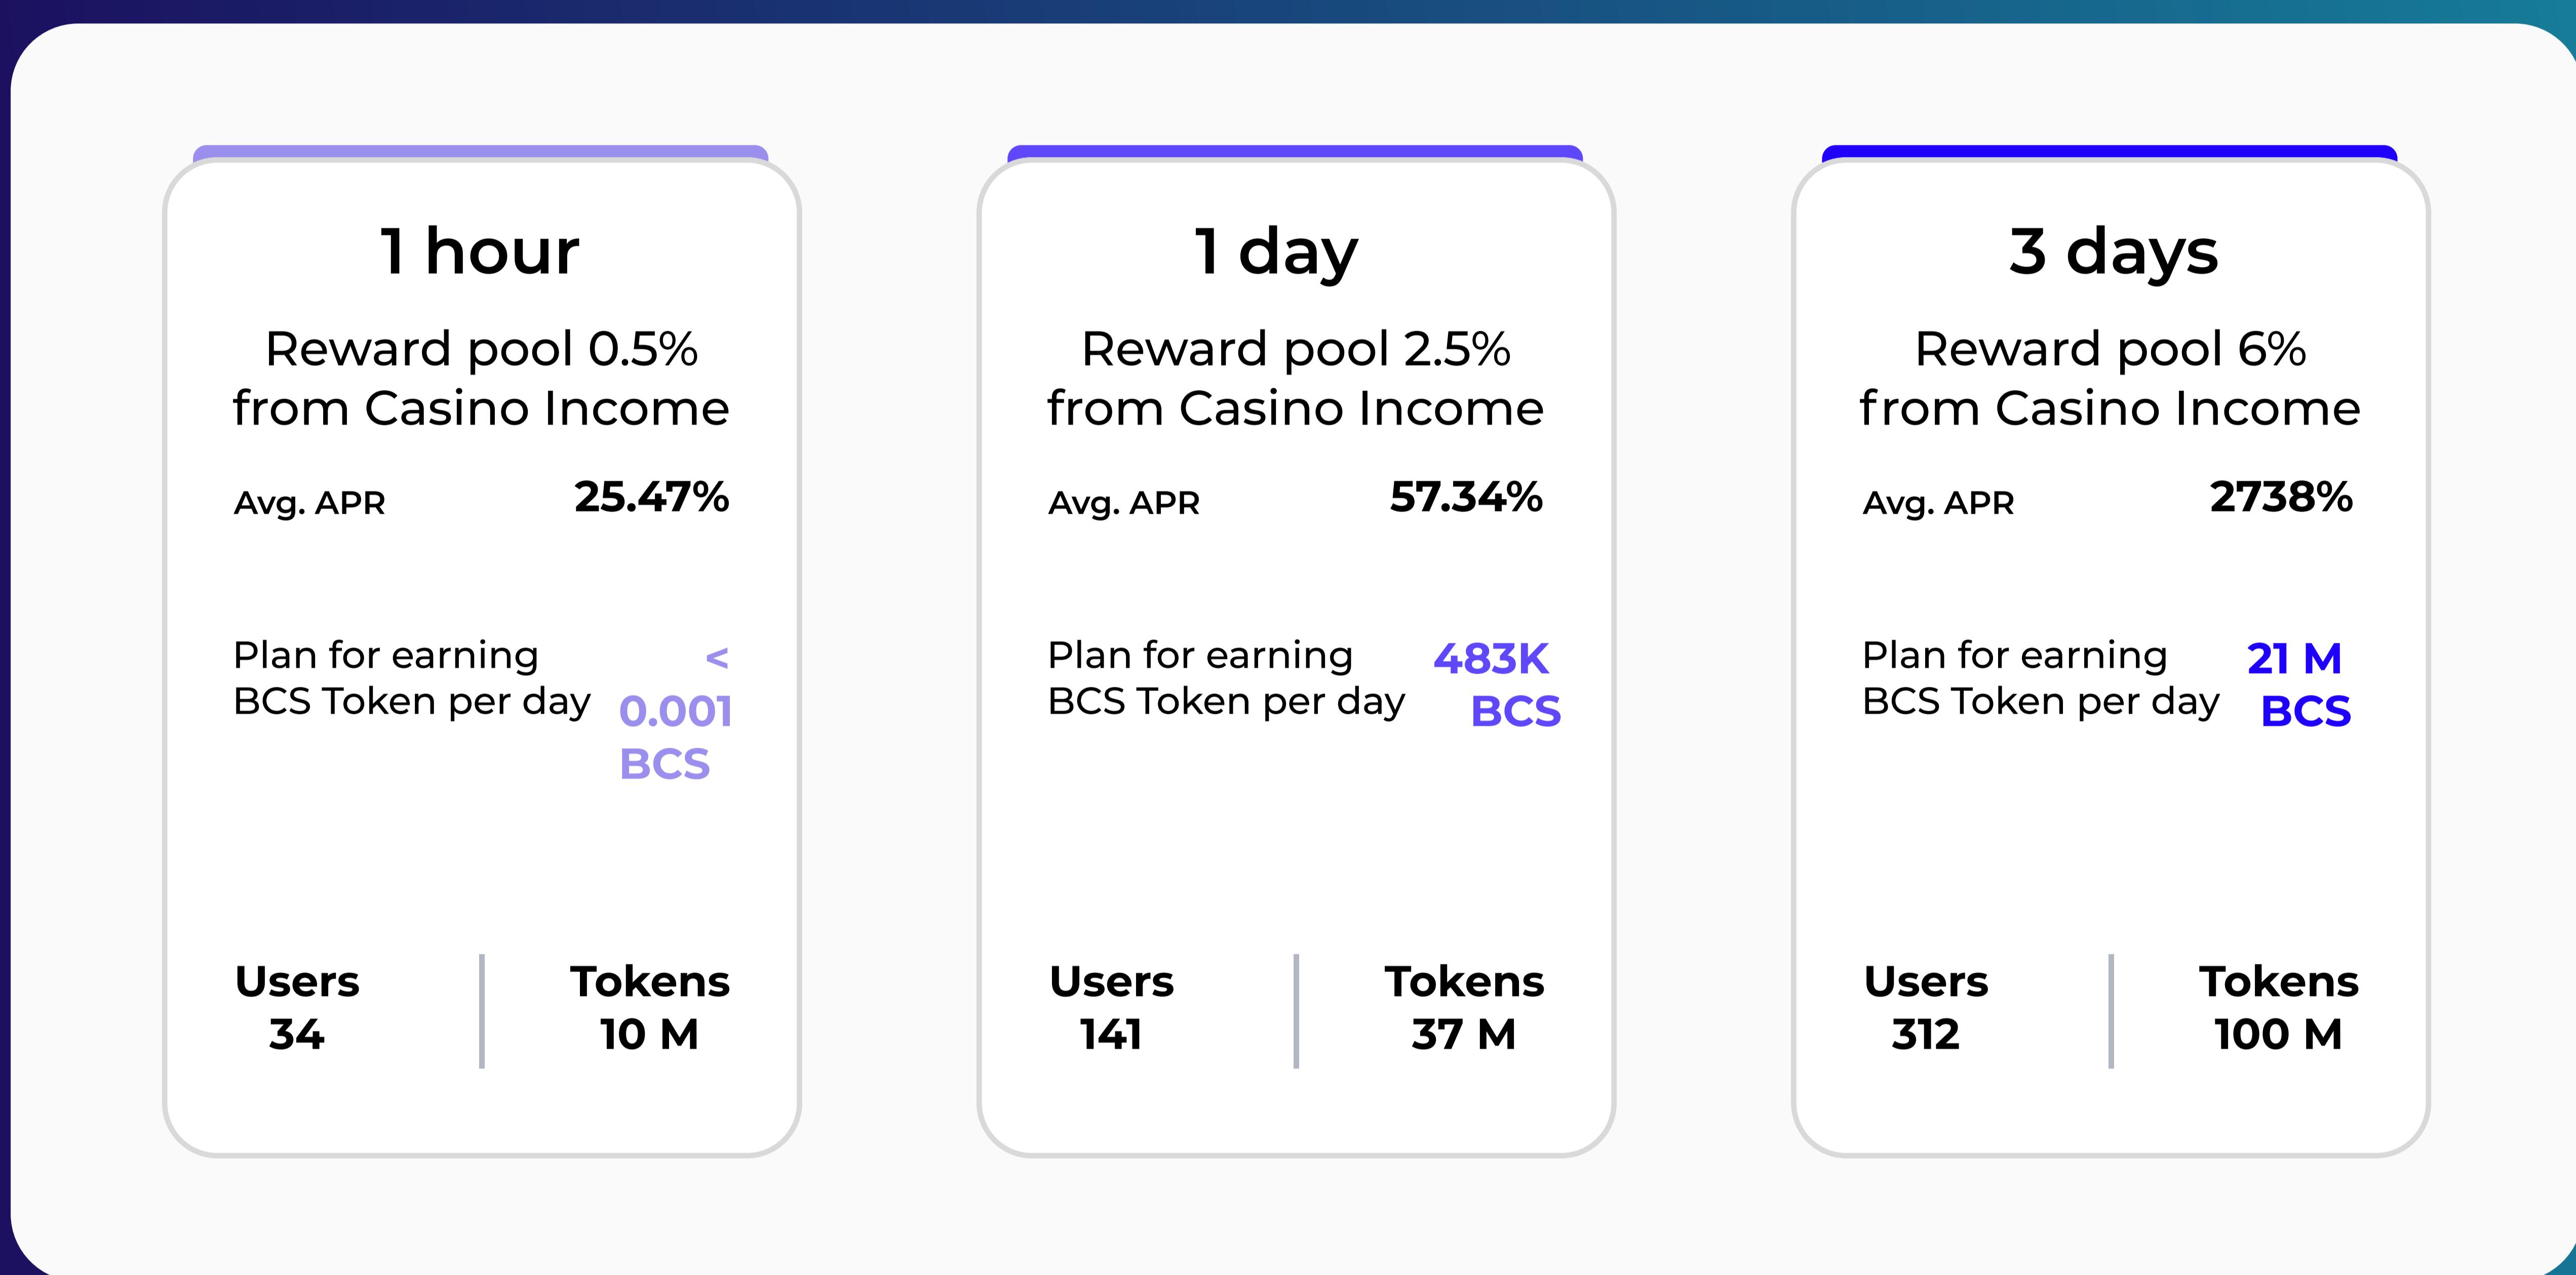

All of this information is available on the MIXEDTECH platform's BCS Token page. The MIXEDTECH platform integrates blockchain technology to preserve and show all betting and holding history, as well as BICAS GGR, for all users. The blockchain protects all data, and the BICAS team has no control over it.

This program has already been started on the BCS token page, and it continues to grow in popularity month after month.

# HOLD TO EARN PROGRAM

## What Is Hold To Earn and How Does It Work?

The user can set the holding time, see the casino income, check the reward pool, and determine the quantity of BCS tokens that will be in the holding using a simple and intuitive tool found on the BCS token website.

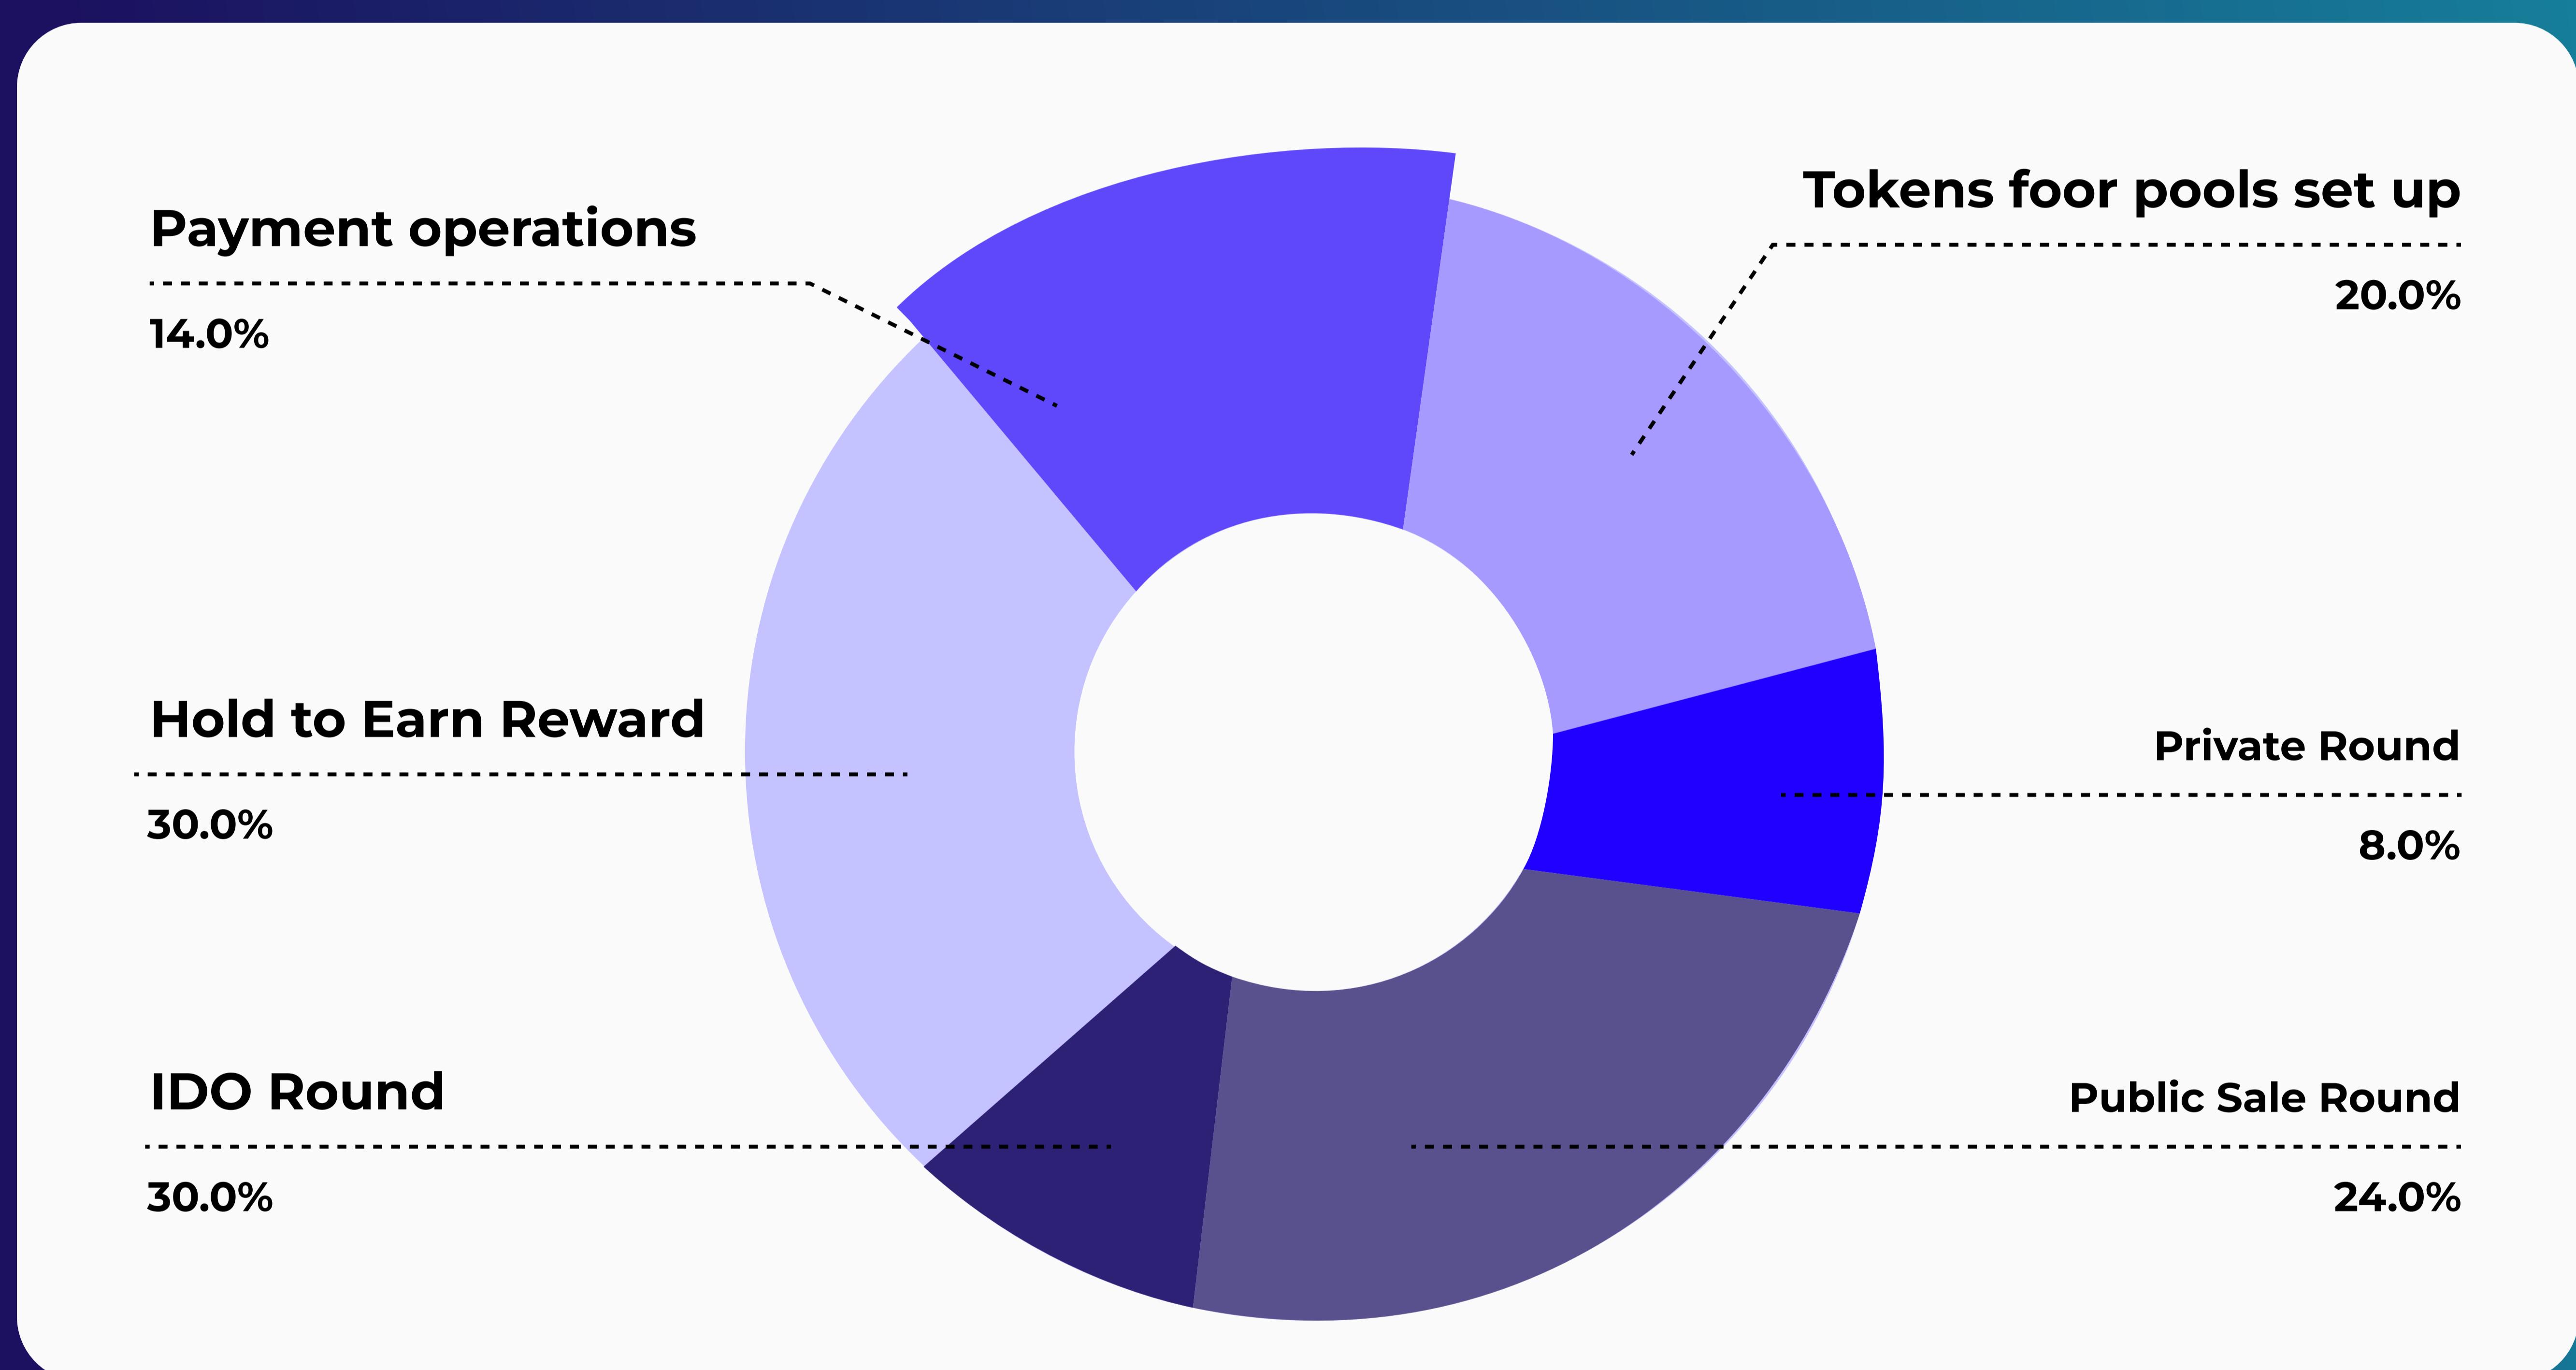

The reward in BCS tokens is automatically credited to the user's balance at the end of the holding and can be utilized for future holds.

## BCS TOKENOMICS

BCS tokenomics are set up in such a way that everyone can take advantage of the platform to its full potential. At the same time, it's important to remember that the token supply is limited, which means that this asset may be in high demand once it's listed on exchanges.

### BCS TOKENOMICS

**TOTAL SUPPLY: 2,500,000,000**

Private Round: **8,00%** (200 000 000 BCS)

A total of 8%, or 200,000,000 BCS tokens, were meant for the Private Round of the Sale, which sold out in less than a day. 20% became available one week following the Public Sale, and the remaining 80% will be unlocked over the next 12 months (6.7 percent per month).

## BCS TOKENOMICS

### Public Sale Round: 24,00% (600 000 000 BCS)

BCS tokenomics is based on the maximum number of tokens that can be sold, which is 600,000,000 BCS from the total supply. The remaining 80% will be unlocked over the course of the next 12 months, at a rate of 6.7 percent every month. All BCS holders who purchased tokens in the first round of the Public Token Sale before November 1, 2021, at a price of \$0.003 per token, are subject to the lockup terms. There is a fixed price of 0.004 per token for all participants in the upcoming Token Sale round, which began on November 1. These tokens, on the other hand, have no lockup period and are immediately visible on the BCS balance on the BCS website here.

### IDO Round: 4,00% (100 000 000 BCS)

For this portion, 4.00 percent of the total emission will be sold, and all tokens sold in this round will be unlocked immediately after the IDO concludes. If it is determined not to carry out IDO, 100,000,000 BCS will be added to the pool for the Public Sale.

### Hold To Earn program reward: 30,00% (750 000 000 BCS)

In our Hold To Earn program, 750,000,000 BCS, or 30.00 percent of the Total Supply, will be divided among holders. The tokens received in this manner are unblocked and available for use in subsequent holdings right away.

### Tokens for pools set up: 20,00% (500 000 000 BCS)

Operating operations account for 500,000,000 BCS. These tokens, for example, will be published on exchanges and will be immediately available without a lock after being purchased on DEX.

## BCS TOKENOMICS

**Payment operations: 14,00% (350 000 000 BCS)**

In specialized events, scaling a project is always related with various financial payments. The BICAS platform has been allocated 350,000,000 BCS tokens.

**Owners of BCS tokens should be aware of the following information.**

All BCS tokens not sold during the BCS Token Public Sale will be burned, which will have a significant influence on the asset price. Because BCS has a limited supply, token owners want to see fewer tokens on the market in order to get a better exchange rate.

# ROADMAP

Since 2022, BICAS has become the first blockchain casino to establish itself as a reliable platform. The BICAS team has been successful in achieving its goal of offering a fair and transparent gaming environment since the outset. As a result, the community scaling rate is still increasing, and BICAS is still transforming the industry.

This approach led to the platform's development of its own play-to-earn BCS token, as well as the implementation of additional initiatives.

## BCS Token Roadmap
